

NEUROGUARDIAN CLINICAL REPORT

Explainable Seizure Detection & Neural Pattern Analysis

1. RECORDING SUMMARY

Filename: sub-008_ses-01_task-szMonitoring_run-07_eeg.edf
Analysis Duration: 11288.0 seconds
Model Type: SEIZE

2. DIAGNOSTIC VERDICT

!!! SEIZURE ACTIVITY FLAGGED !!!

Clinical Interpretation:

Detected 2 clinical episodes totaling 12.5s. Low-amplitude rhythmic patterns detected; artifact contamination possible.

3. DETECTED EPISODES LOG

Onset Time (s)	End Time (s)	Duration (s)	Max Confidence
1215.0	1222.5	7.5	0.8
10055.0	10060.0	5.0	0.8

4. EXPLANABILITY (XAI) VALIDATION

This analysis is accompanied by persistence and faithfulness metrics to ensure model trust. Cross-dataset stability is monitored to flag potential domain-shift errors.

Faithfulness Score: High (verified via perturbation testing)

DISCLAIMER: This is an AI-assisted diagnostic tool designed for research purposes. Final clinical decisions must be made by a qualified neurologist after manual review of the raw EEG signals.
